The Next Generation in Laptop Management

Delivering Workspace Solutions for the Modern Enterprise

Quickly Onboard Your Team with Ready-to-Use Devices

Gain Valuable Insight into End-User Devices

Improve IT and Workforce Efficiency

Significantly Reduce TCO

Modernizing Laptop Managment

Onboarding new devices are creating a double-edged sword for today's Enterprise IT teams. While they eagerly await premium technology, like the newest business-class notebooks, it's the subsequent rollout and management of these laptops that creates headaches across organizations.

Your end-users expect nothing less than devices which are imaged, connected, and protected -- and stay that way. On already stretched thin IT resources that can be a very labor-intensive and costly task especially when the scope of the project is a large-scale laptop acquisition or when assessing the long-term effects.

Introducing The Next Generation in Laptop Management

Driven in large part by the BYOD movement, Enterprises now have access to a new arsenal of Laptop Management resources that are critical to the overall success of their organization.

In fact, according to a recent Gartner study, "Effective management can cut Total Cost of Ownership for laptops by 45%." The study explains that for a large company, a laptop may cost $1,500 to buy, but the TCO could balloon to over $9,900 per year over three years when you add in managing complex computing models with varying architectures. However, when devices are locked down and well managed, both the TCO and maintenance are lowered significantly.

To help control your devices, NWN's new laptop management solutions are ready to deliver workspace solutions for your modern Enterprise, including:

- **Virtual Desktop Imaging –** Help your team work when and how they want with seamless access and sharing of corporate information.

- **Mobile Device Management –** Enable your IT team to integrate devices with ease, eliminating hours of redundant IT tasks and support calls.

- **Always On-Networks –** Create an IT environment that offers greater flexibility, scalability, reliability and visibility.

Are you ready to bring innovations in laptop management to your Enterprise? Contact our workspace team to learn more.

Benefits of Effective Laptop Management

Deliver a **consistent and predictable** computing environment for end-users. Think running multiple operating systems side-by-side on a Samsung laptop.

Boost **workforce efficiency** by enabling your team to pick up any device and get to work, anywhere and anytime.

Protect your data, devices and users with capabilities and tools that prevent theft and malware.

Deploy, view and **secure multiple end-user devices** from a single management console.

Reduce TCO by **up to 45%.**

Turnkey solutions can onboard Enterprise devices with ease. Your devices can be customized with your standards and specifications -- **ready for work**, right out of the box.
